The Unbreakable Computer? Computing's best kept secret comes to York

York computer users need no longer fear the blue screen of death, power cuts, viruses or anything else which can terminally crash their computers for SecuriQuest has just appointed York Computer Clinic local distributor for the PROTECTOR.

The PROTECTOR is a card which sits in the computer and protects it from damage caused by, for example, trojans, worms, viruses, accidental file deletions, hackers, sabotage, power cuts, corrupted files, operating system crashes, registry crashes and software installation problems. All of these problems (and many others) are solved at the push of a button and the PC is automatically restored.

Dr Paul Hildreth of SecuriQuest, the northern distributors of the card, said 'I was very sceptical when I read the specifications, but when I formatted the hard drive and it recovered from that I knew I was dealing with a very useful piece of equipment'.

So who needs the PROTECTOR? 'Anyone with Windows on their PC' says Sonjia, proprietor of York Computer Clinic. 'It's perfect for schools, colleges, universities and Internet Cafes as it practically guarantees 100% uptime for the users. And it's essential for businesses as it dramatically cuts the need for IT support so valuable technician time can be planned and used more effectively. At only £70 per card it can drastically reduce the IT support costs of a company – and it's affordable for the home user who wants a stable PC.'

A demonstration unit is available at York Computer Clinic, 90 Tadcaster Road, York, YO24 1LT for anyone who fancies their hand at trying to beat the card
